HTML Assignment - Day 1

Personal Portfolio

Create a personal portfolio/website where you can provide details about yourself, i.e. work experience, education, skills, hobbies, contacts, etc.
Consider this as your resume in the form of a website instead of a doc.

Following are the primary requirements that must be included in this assignment.

- At the top of the screen must be a navigation bar that can redirect the user to various sections of the website.

- The first section must be the 'Welcome/About' screen which must contain the following:

  - Your image with width 300px and height 500px. On hovering over the image your name should be displayed. (Hint: use 'alt' attribute)

  - Your name which should act as the heading of the webpage.

  - Your current designation (eg. Software Engineer) which should be displayed in *italics*.

- The second section must be the 'Work Experience' screen which must contain the following:

  - Your previous work experience/internships/college projects in the form of a list.

  - Try to use both ordered and unordered lists for a better hands-on.

  - Example:

    1. Experience 1
       - Description line 1
       - Description line 2
    2. Experience 2
       - Description line 1
       - Description line 2

- The third section must be the 'Education' screen which must contain the following:

  - A table which contains the following information:

    - Qualification (i.e. B.Tech., HSC, SSC, etc.)

    - Name of Institute

    - Year of Passing

    - CGPA/Percentage

  - Try to cover the variety of table tags like <thead>, <tbody>, <tr>, <td>, etc. for a better hands-on.

- At the end must be a contacts/know more section which must contain the following:

  - Link to your 'Github' profile. When user clicks on the link, it should open in a new tab just to make it more convenient.

  - Your contact number

  - Your email id

The purpose of this assignment is to get you to practically try out the stuff that you learnt in the theory lectures. Feel free to be creative and add more to this than what's already given since this is your website.😉

HAVE FUN!

ALL THE BEST!👍
